

Abstract

5 The invention relates to an apparatus for shrinking a
heat-shrink foil wrapped in particular about a palletted object
stack. in order to improve on such an apparatus so that shrinking
of the foil part projectingg past upper and/or lower face is
pmproved and produces an optimal fold-free shrinkage, an apparatus
for shrining a heat-shrink foil wrapped in particular about a
palletted object stack comprises at least one shrink device movable
vertically up and down on a frame to heat and shrink the heat-
10 -shrink foil, the heat-shrink foil projecting past the upper and/or
lower edge of the object stack to form an upper and/or lower shrink
formation, the apparatus further comprising at least one nozzle
connected to a compressed air source and aimed centrally above
and/or below the object stack and generally vertically directed
15 thereat, each nozzle having outlet openings that extend at an angle
not coinciding with the flow direction inside the nozzle and that
are in an annular array.
